TO WHOM IT MAY CONCERN:

Re: Jim Cochran
15 South 4th East
Heber City, Utah 84032

Mr. Jim Cochran was first seen by me on January 3rd 1966 presenting a history of intermittent low back pain for past five years. Now pain is radiating into left hip and occasionally into left knee. The pain is aggravated with cold weather and increased activity. Pain decreased with massage, application of heat etc.

Family history: Father has severe Rheumatoid Spondylitis.

Physical examination shows pain at left sciatic notch.
X-ray reveals decrease at L_5S, interspace.
CBC: Hgb. 15.6, WBC 9,400, Ht. 49, ESR 4, R.A. Negative.

Impression: 1 - Disc
2 - Cannot rule out Early Rheumatoid Arthritis of spine.

As of this date - September 16th 1966 - Mr. Cochran is still having intermittent mild back pain.

Prognosis: Will probably continue to have the same problems as now throughout the rest of his life.

Sincerely,

J.D. Boggess, M.D.

Re: Jim Cochran
15 South 4th East
Heber City, Utah 84032

Mr. Jim Cochran was first seen by me on January 3rd 1965 presenting a history of intermittent low back pain for past five years. Now pain is radiating into left hip and occasionally into left knee. The pain is aggravated with cold weather and increased activity. Pain decreased with massage, application of heat etc.

Family history: Father has severe Rheumatoid Spondylitis.

Physical examination shows pain ~~in~~ at left sciatic notch.
X-ray reveals decrease at L_{4-5} interspace.
CBC: Hgb. 15.5, WBC 9,400, Hct. 49, ESR 4, R.A. Negative.

Impression: 1 - Disc
2 - Cannot rule out Early Rheumatoid Arthritis of spine.

As of this date - September 16th 1965 - Mr. Cochran is still having intermittent mild back pain.

Prognosis: Will probably continue to have the same problems as now throughout the rest of his life.

Sincerely,

J.D. Boggess, M.D.
